

Report for assignment 2 (quadratic solver)

Name: Harrison Student ID: D1265315

First, after taking input for three variables (a, b, c) as per the task, it checks if 'a' is equal to zero. Then, it proceeds to apply the conditional checks and determines the type of roots based on their magnitudes. Following that, it gradually outputs the entire equation in accordance with the task requirements. Finally, it calculates the roots of the equation using the appropriate formula.
