

Assignment 4 report

Corrine Tseng

First of all, I have no idea how to solve the assignment problem. So, I search some sources from the internet. Because of unfamiliar with C++ program, I started with the fundamental programming syntax. After understanding how C++ works, I can write the assignment. I figured out that there are just a little difference between C and C++. For instance, `<stdio.h>` converted into `<iostream>`, `'malloc'` converted into `'new'`, and the function of `'cin'`, `'cout'` and using namespace, etc. Therefore, I successfully finished my assignment. And through the instructions that the teacher gave us, I wrote `<Node.cpp>` at first, then, I wrote `<IQueue.cpp>`. At last, I wrote the main function.
