

Draw House Purdue

D1262028 Jimmy 李皓鈞

In the first assignment, it is hard for me to draw a house by using the programming language because I had never learned any programming language before taking this class. Hence, I spent a lot of time to understand the meaning of every program logic and to construct how to build my house. Even though there were still some problems that I cannot figure out by myself, I asked my classmates Jason and Antonio to give me some tips about how the programming language works. After their teaching, I felt like I was just stricken by a lightening. The ideas came out like the water from fountain that never stop, so I finished my first assignment in just three hours. For me, this is the first time I finished a C programming assignment by myself which gives me a great sense of accomplishment.
