Quadratic Equation Verification with Complex Number Operations

D1262092 陳彥勻

It's the first time I learned how .dev files works, it took me some time to understand it. But it's worth it, .dev allows us to combine a lot of files together and separate different parts of work.

The rest is just about solving Quadratic Equation which we already learned last semester. The hardest part is to verify the roots, for some reason I always failed to verify roots with imaginary numbers.
