Programming Assignment 6: Linear Equation System Solver

D1271450 Eileen 李宇恩

The process of writing the code for the Linear Equation System Solver

Firstly, I opened a project and added six files into one main, three header, and three .cpp, each for different purposes, I first use the header file provided by the teacher, and then finished the .cpp file according to the header file, then throughout the process of writing out the code for the main file, I inserted the needed operations from the .cpp to the main file to use, after finishing the print out, and the inserting, then I started with the verifying part which I thought for a long time, finally I got how to calculate and to see if they match, the answer and the one printed out.
